How To Measure Quickly and Accurately

INSIDE MOUNT

OUTSIDE MOUNT

INSIDE MOUNT (IM) INSTALLATION — For a beautiful framed look

❶ MEASURE WIDTH

Measure to the nearest ⅛ in. between inside surfaces of window frame; at the top, middle, and bottom.

Record the narrowest width of the three.

❷ MEASURE HEIGHT

Measure to the nearest ⅛ in. from inside surface at top of window to top of sill; at the left, middle, and right.

Record the tallest height of the three.

❸ MEASURE DEPTH

Measure exact depth of window casing making note of any obstacles, i.e. handles, tracks, or cranks that could interfere with the blind function.

Use the shortest depth.

OUTSIDE MOUNT (0M) INSTALLATION — For increased light control and privacy

❶ MEASURE WIDTH

Measure to the nearest ⅛ in. between outermost points where blind is to be placed.

Measurement should overlap each side of window frame by at least 1 ½ in.

❷ MEASURE HEIGHT

Measure to the nearest ⅛ in. from where top of blind will be located to top of sill, or measure to point of blind reach if no sill.

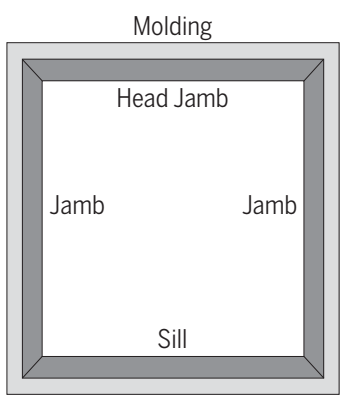

HELPFUL HINTS

- Always use a metal tape measure as cloth may stretch
- Measure your window – not your existing blind or shade
- Measure each window separately even if they appear to be identical
- Check depth to ensure blind will clear any obstacles and can accommodate headrail if flush mount is desired
- If you prefer blind not to touch sill, deduct ¼"
- If there is no sill, measure height to point where blind is to reach

NOTE: Take all measurements to the nearest ⅛ in. **DO NOT** take any deductions. The factory will make the necessary adjustments to help ensure your window covering operates smoothly.

Window and Measuring Terminology

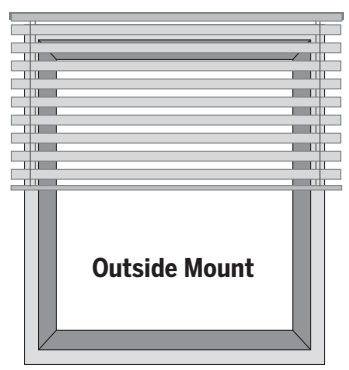

WINDOW COMPONENTS TERMINOLOGY

- Collectively, the sill and jambs are called the “window casement" or "frame."

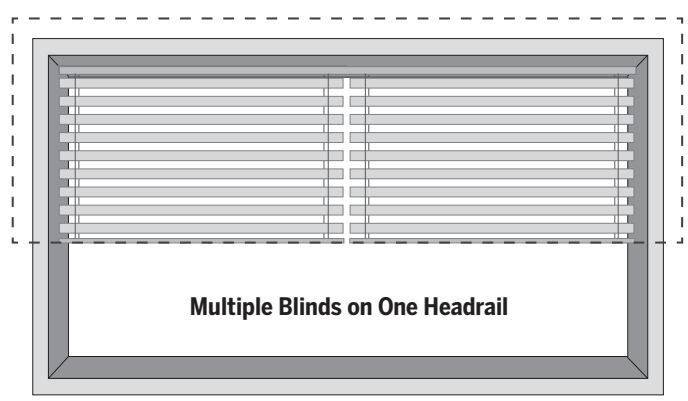

INSIDE MOUNT

- Blind fits within window opening.
- Great for windows with beautiful trim.

OUTSIDE MOUNT

- Blind mounts outside window opening.
- Increased light control and privacy.

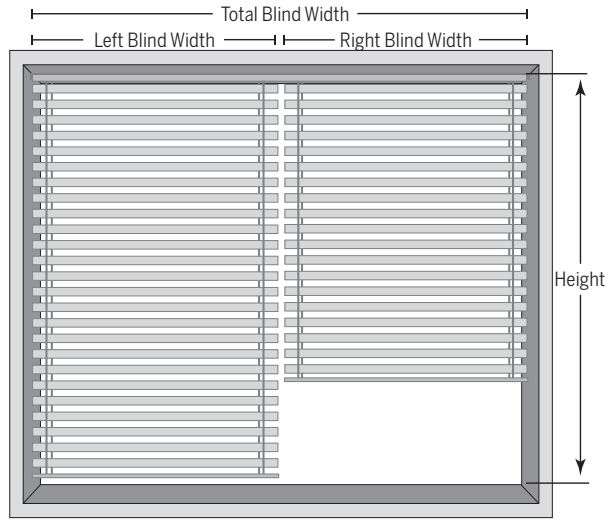

MULTIPLE BLINDS ON ONE HEADRAIL

- Provides the clean appearance of a single blind with the ability to operate each blind independently.
- Can be mounted inside or outside.
- Can be 2-on-1 or 3-on-1, depending on width of window. 2-on-1 is shown in the image above.

How to Measure Two Blinds on One Headrail

INSIDE MOUNT (IM) INSTALLATION — For a beautiful framed look

❶ MEASURE WIDTH

Total Blind Width — Measure to the nearest ⅛ in. between inside surfaces of window frame; at the top, middle, and bottom. **Record the narrowest width of the three.**

Left Blind Width — Measure the width that you want the left blind to cover. **Order this blind first when placing your order.**

Right Blind Width — Measure the width that you want the right blind to cover.

❷ MEASURE HEIGHT

Overall Blind Height — Measure to the nearest ⅛ in. from inside surface at top of window to top of sill; at the left, middle and right. **Record the tallest height of the three.**

❸ MEASURE DEPTH

Measure exact depth of window casing making note of any obstacles, i.e. handles, tracks, or cranks that could interfere with the blind function. **Use the shortest depth.**

OUTSIDE MOUNT (0M) INSTALLATION — For increased light control and privacy

❶ MEASURE WIDTH

Overall Blind Width — Measure to the nearest ⅛ in. between outermost points where blind is to be placed. **Add an additional 3 in. to 6 in. to total width for maximum privacy.**

Left Blind Width — Measure the width that you want the left blind to cover. **Order this blind first when placing your order.**

Right Blind Width — Measure the width that you want the right blind to cover.

MEASURE HEIGHT

❷ **Overall Blind Height —** Measure to the nearest ⅛ in. from where top of blind will be located to top of sill, or measure to point of blind reach if no sill.

How to Measure Three Blinds on One Headrail

INSIDE MOUNT (IM) INSTALLATION — For a beautiful framed look

Product Specifications

Use technical information listed below to assist in product selection.

Product Performance Comparison			
Category	Resistance to Slat Warpage	Resistance to UV Fading	Lift Weight* (Approx. 36" x 60")
Real Wood	Better	Best	Best (5 lbs)
Faux Wood	Best	Better	Better (8.5 lbs)

* Weight of slats and bottom rail only. This weight does not include valance, headrail, or componentry weight as these are stationary when blind is raised/lowered.

Note: Not applicable to Classic Value Faux Wood.

Number of Cords Comparison:

Levolor Real Wood	Levolor Faux Wood	Other Faux Wood
2.6 avg ladder cords	3.7 avg ladder cords	4.5 avg ladder cords

Note: Not applicable to Classic Value Faux Wood.

LEVOLOR Custom Faux Wood uses nearly 1 less ladder per blind than the competition

Benefits of Fewer Cords:

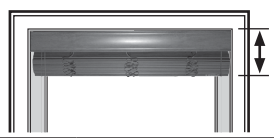

- Cleaner look that allows the beauty of the slat finishes to be the spotlight
- Less obstructed view of the outdoors
- Improved safety

Light Control Performance Comparison		
Route, Operating System	Prior Light Blocking Performance	Improved Light Blocking Performance
Privacy, Corded Lift	3	5
Privacy, Cordless Lift	2	3
Standard Route, Corded Lift	3	5
Standard Route, Cordless Lift	1	3

Index (Percent Light Blockage): 1 = < 70%, 2 = 70-80%, 3 = 80-90%, 4 = 90-96%, 5 = 96%+

Blinds will not block out 100% of light or achieve complete darkness. Small percentages of light may still pass through slat gaps and/or route holes.

Note: Not applicable to Classic Value Faux Wood.

VALANCE RETURN DIMENSIONS – INSIDE MOUNT

- For inside mount installations where headrail protrudes from window casing.
- Returns may be ordered in sizes ranging from ½" to 6".
- Measure to the nearest ⅛" using a metal tape measure.
- If the valance is the same width as the blind, measure from the window trim to the end of the headrail.
- If the valance is wider than the blind and extends over the window trim, measure from the wall to the end of the headrail.

(If you are unable to measure for returns, LEVOLOR recommends a return size of ½" which will work for most situations.)

OPTIONS AVAILABILITY

EXTENSION BRACKETS

For installation requiring additional space between the blind and the mounting surface.

Not available on Classic Value Faux Wood.

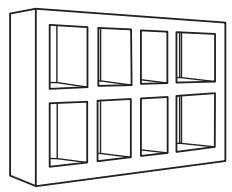

SPACER BLOCKS

Used to space blind away from mounting surface and avoid obstructions such as window trim, window locks, or on double hung windows.

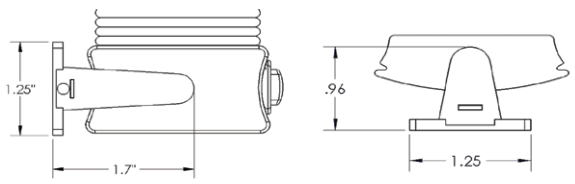

Each spacer block extends the blind by ⅜". One spacer block per bracket will be provided when requested.

Only available on Classic Value Faux Wood Blinds.

HOLD-DOWN BRACKETS

Hold-down brackets prevent blinds from swaying. They can be sill mounted, face mounted, or mounted inside the frame. Recommended for French doors and windows subject to wind exposure. Must be requested at time of order.

CONTROL OPTIONS AND POSITIONING

Choice of control position is available. Tilt control left and lift control right is standard position. You may choose to reverse the standard position. There are no control or positioning options for Classic Value. Grouped controls, both tilt and lift controls on the same side are available on Real Wood only.

WAND TILT

Wand tilt is the default tilt control and standard on 1" Real Wood and cordless blinds. For Classic Value, wand tilt left is the only option.

CORD TILT

Available in place of wand tilt. Operating cords will have a default length of 40% of the blind height for added child safety and to reduce the chance of accidental strangulation. Operating cords may be changed to customized length when required to ensure user accessibility. Not available on cordless or Classic Value Faux Wood.

UPGRADES

PRIVACY ROUTE

Edge route design provides tighter closure to minimize light for increased privacy and security. Slats can easily be removed for cleaning. Not available on 1" blinds or blinds with Decorative Tapes.

Standard on Classic Value Faux Wood.

Privacy Slat

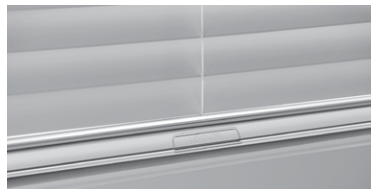

Standard Slat

CORDLESS CONTROL

The design of our cordless operating system creates a clean profile across all of your windows and makes it easy to lift and lower your blinds without dangling cords. Not available on 1" Real Wood. The functional LEVOLOR button smoothly raises and lowers your blinds when pressed and locks the blinds in position when released.

Cordless for Classic Value Faux Wood features a friction based system that operates by simply lifting up or pulling down on the bottomrail.

Cleaning and Care

Keep your LEVOLOR Real and Faux Wood blinds looking their best by periodically wiping them with a soft cloth, a duster, or the brush attachment from a vacuum cleaner.

Note: Improper cleaning may void warranty

- You can clean the blind hanging in place or you can take it down.
- By tilting the slats down, but not quite closed, you will be able to clean most of the top surface of each slat.
- **Do not use water, solvents, or abrasive solutions to clean the blind.** This will cause damage to the blind which is not covered under warranty.
- **Real Wood Blinds:** In very dusty environments, you may use a non-wax furniture polish to clean the blind.
- **Faux Wood Blinds:** You may use a soft, lightly dampened cloth to clean your NuWood blinds.
- **Blinds with Privacy Route:** Slats can be removed for cleaning. Slide out the slat, wipe clean, and return to its original position. If a light gap occurs for any reason, simply flip the slat over to cover or close the gap.
