INHERENT CHARACTERISTICS

Due to the weave and nature of the material, the following are the inherent characteristics and are not considered defects:

- A moiré effect may occur when the sheer fabric bands are aligned.
- The fabric color appearance may vary based on the light conditions in the room, light reflection from interior decor, or the position of the shade (open/closed/partial).
- The front fabric may appear wavy or bow due to the weave and construction of the fabric.
- There may be a hue variation between complementary LF & RD fabric.

FABRIC NOTE

- Static electricity build up on fabrics is a common occurrence in dry environments, especially during colder seasons. To help reduce static on your shades, lightly spray an anti-static product on the fabric or gently wipe the fabric with dryer sheets.

SIDE-BY-SIDE VANE ALIGNMENT

Side-by-side band alignment refers to the alignment of the bands from left to right on 2 or more shades mounted next to each other.

Exact alignment cannot be guaranteed. Please adhere to the following to ensure the best material alignment:

- Order shades at the same time and in the identical style, color, height, operating system and application.
- Specify on the order form, under special instructions, that shades need to be aligned.
- Do not use side-by-side for dye-lot consistency.
- To ensure the best material alignment, the combined width of side-by-side shades should equal less than the maximum fabric width.

BAND ALIGNMENT

Band alignment from the front to the back panel can appear different. Fabric and sheer bands are set in fabrication to align front-to-back in the closed position. Due to possible slight variances in band sizes that are within industry standards, bands could appear to not align perfectly from the front to the back panel when in the open position.

SHADE HEIGHT

The finished shade height will always be in the fully lowered, closed position with bands offset. When the solid bands are aligned in the open position, the bottom rail raises up slightly, approximately half the width of the solid band height.

- On an inside mount application, the bottom rail will be slightly above the windowsill.
- On an outside mount application, it will be slightly above the bottom of the window opening.

CARE AND CLEANING

Shades are polyester and treated to help resist dust, dirt and stains.

Dusting - Dust your shades regularly using a feather-like duster, or cylindrical dust brush specially designed for shades.

Compressed air/Hair dryer (cool setting) - Use a can of compressed air or a hand-held hair dryer on the COOL setting to blow off dust and debris.

Ultrasonic cleaning - Professional ultrasonic cleaning can be used.

Vacuuming - Use a hand-held vacuum with low suction for more thorough dust removal.

Note: Banded Shades should not be spot-cleaned
